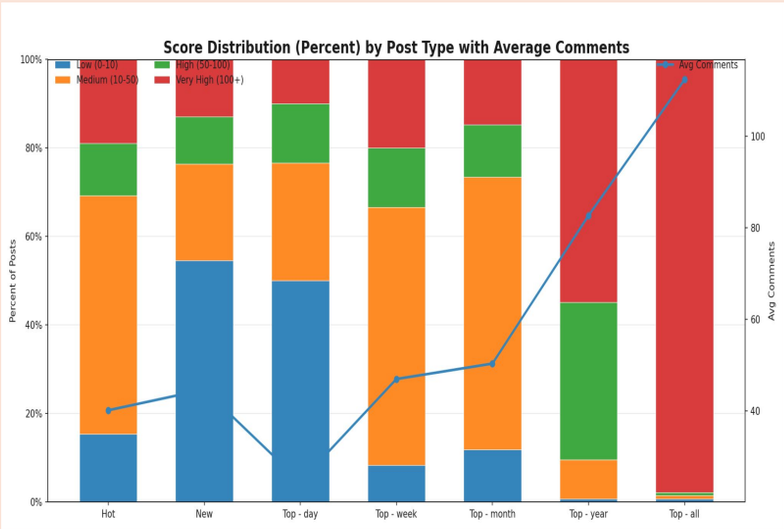
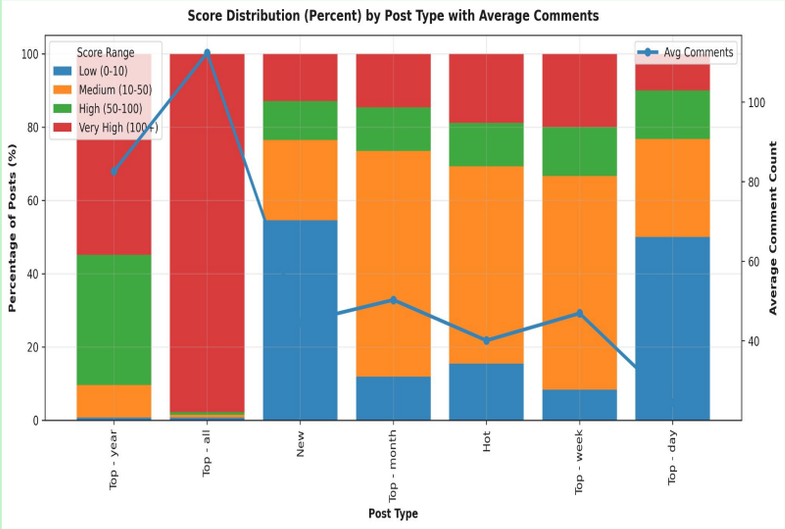
DV-Evol Good Case——Apache Echarts

Question:
- Change stacked bars to within-type percentages (each Post Type totals 100% on left axis).
- Title: "Score Distribution (Percent) by Post Type with Average Comments".
- Colors (bars): Low #1f77b4, Medium #ff7f0e, High #2ca02c, Very High #d62728.
- Avg Comments line color: #1f77b4.
- Keep everything else the same (dual axes, bins/labels/order, legends positions, gridlines).

GPT-5.2:



Ground Truth:



Successfully completed:
- Converted the stacked bars from counts to percentage stacks: each Post Type totals 100% on the left axis.
- Kept the four score bins (Low / Medium / High / Very High) and rendered them as stacked segments.
- Updated the title to the percent version: "Score Distribution (Percent) by Post Type with Average Comments".
- Largely matched the color mapping: Low=blue, Medium=orange, High=green, Very High=red; the Avg Comments line is also blue with circle markers.
- Preserved the dual-axis structure: left axis = percent stacked bars, right axis = Avg Comments line.
- Included all Post Type categories (no missing groups).

Percentage Of Score: 78.125%
