DV-Sheet:Dashboards-Bad Case

Error Category:
★ Visualization Design
★ Data Logical Consistency

Query:
I know the stock market is highly volatile, but I need to immediately understand which factors are driving the fluctuations in stock prices, especially sentiment and geopolitical risks. Analyze the data and help me create a dashboard to understand how various factors impact the stock price trend.

Error Analysis:

★ **Incorrect Data Aggregation Level:** The charts attempt to display over 115 years of data (1902-2017) on a single, small scale. This level of aggregation flattens significant historical volatility and masks the granular "Daily Return" and "Volume" fluctuations required to solve real-time market analysis problems.

★ **Data Filtering/Range Issues:** The first image includes data from 1902, whereas the core analysis (per the correct images) should focus on the **"Last 500 Days" to provide relevant, actionable insights.

★ **Incorrect Chart/Analysis Type:** The "Sentiment & VIX Trend" uses a line chart for two variables with vastly different scales (Sentiment is between -1 and 1; VIX is ~30), causing the Sentiment line to appear as a flat, useless stroke.

★ **Missing Visual Components and Readability Issues:** The "Trading Volume" chart is entirely blank/broken, showing no data points or bars.

Percentage Of Score: 26.67%
