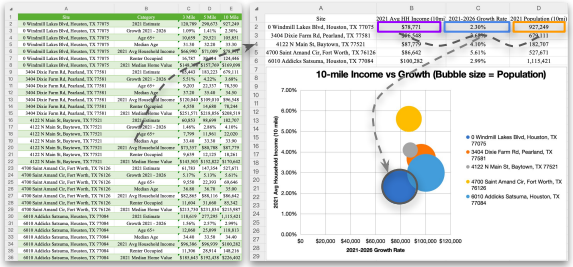
❶ DV-Sheet: Create

Create Native Spreadsheet Chart

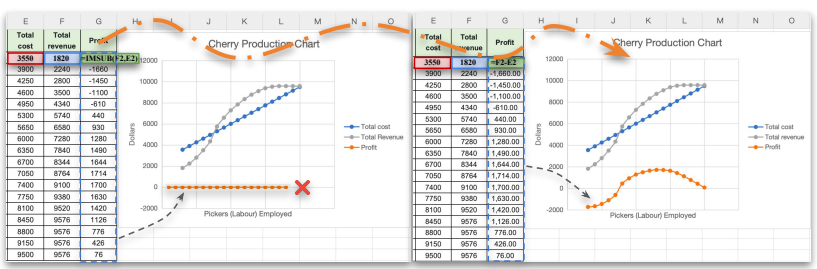
Create a scatter plot to analyze which location has the most advantage in income, growth rate, and population size.



❷ DV-Sheet: Fix

Fix Native Spreadsheet Chart

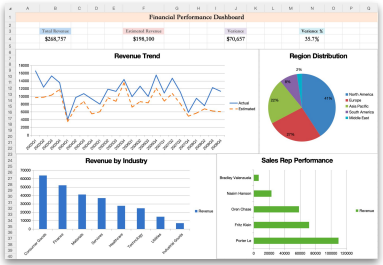
Please fix the chart to show the actual profit trend.



❸ DV-Sheet: Dashboards

Create Native Spreadsheet Dashboards

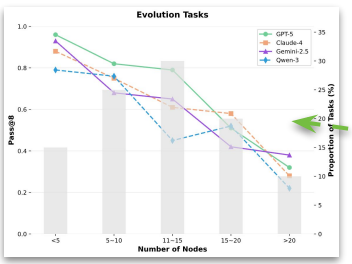
Analyze revenue trends and key drivers.



❹ DV-Transfer: Image2Code

Convert chart image to code.

Reproduce this image and modify the title.



```
import matplotlib.pyplot as plt
import numpy as np

# 1. Prepare Data (Estimated from the original image)
categories = ['<5', '5~10', '11~15', '15~20', '>20']
x = np.arange(len(categories))

# Right Y-axis data (Gray bar chart - Proportion of Tasks)

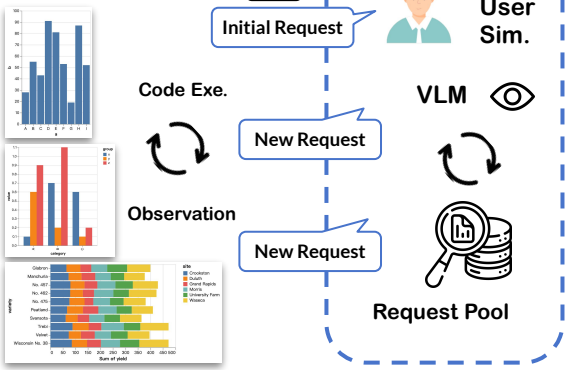
# 2. Setup Plot Style
fig, ax1 = plt.subplots(figsize=(10, 7))
fig.patch.set_facecolor('white')
.....
# Ensure line charts are drawn on top of the bar chart
ax1.set_zorder(ax2.get_zorder()+1)
ax1.patch.set_visible(False) # Make ax1 background transparent

plt.tight_layout()
plt.show()
```

❺ DV-Transfer: Code2Code

Translate code between tools.

❻ DV-Interact

Multi-turn interactive visualization.


```
import matplotlib.pyplot
as plt
import numpy as np

# 2. Setup Plot Style
fig, ax1 =
plt.subplots(figsize=(10,
7))
fig.patch.set_facecolor('w
hite')
.....
# Ensure line charts are
drawn on top of the bar
chart

plt.tight_layout()
plt.show()
```
